

C7 Corvette Iphone Mod

I found a nifty little set up for my Iphone use in my C7. I know we are not suppose to use them while driving and I don't encourage you to do that. To use CARPLAY you need to have a longer cable and be able to plug it in to the normal USB terminal.

But if you want to see your phone while it is plugged in charging without the use of CARPLAY this may work for you.

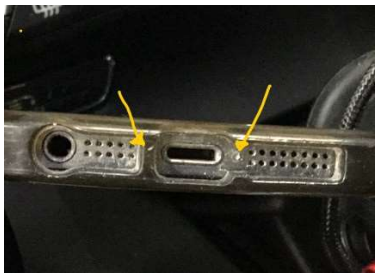

Open your cig lighter pop up and plug in a shorty phone charger, mine is for a USB. The phone charger plug in must be a short one see picture to see how short it is.

I believe mine is less then 2inches tall. I wont talk about the cost because all of these items vary in pricing and you can easily find them on the internet if not in your local store.

The cable I use has a Iphone plug (lightning) on one end and a USB on the other. The Iphone plug end has a 90 degree angle and the USB end is a 45 degree angle. I recommend you use a 90 degree angle on both ends if you can find it. The cable is about 12 inchs in length but had I been able to find a quality 6 incher I would have got it. On my phone I had to clip off part of the case (right side) where the lightning cable connects to the phone, see picts with yellow arrows, (left side remains). This allowed the cable to fit snug up against the plug and ensures the cable is not going to be loose.

The WIZGEAR magnetic phone holder is designed to clip on your air vents and the prongs in the back are made for thick or thin vent blades. Use the thicker opening and clip it on the top of the cig pop up. As you can see from the cig lighter pop up tray the lid is pretty thick but the WIZGEAR phone holder fits on there nice and snug using the wider opening on the prongs. Of course you will need to place the metal plates on your phone with the tape provided or do it like I did and place it under the phone cover between the phone and the cover without using the tape.
